

AgentCRE

Powering the Next Era of Enterprise AI

AgentCORE – a platform that empowers enterprises to build, train, and deploy intelligent AI agent models that assist and accelerate ERP, CRM, and enterprise workflows.

Anchored in unified Enterprise AI Ops, AgentCORE provides end-to-end AI/ML lifecycle management - covering seamless data integration, experiment tracking, automated CI/CD, and real-time model monitoring to enable continuous learning and reliable performance at scale.

Forward-thinking teams are accelerating AI product lifecycle, reducing development time by 50% and cutting cost by 25%, transforming routine operations into proactive, scalable solutions that break data barriers and drive innovation for tomorrow's intelligent enterprises.

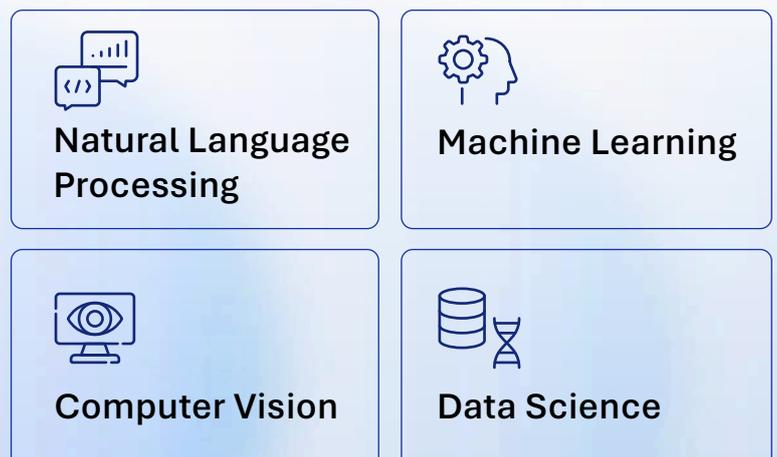

The Platform Differentiators

Powering the core engine of AgentCORE, these capabilities streamline how enterprises build, deploy, and manage AI. By unifying data, workflows, and governance, the platform ensures scalability and reliability in AI operations.

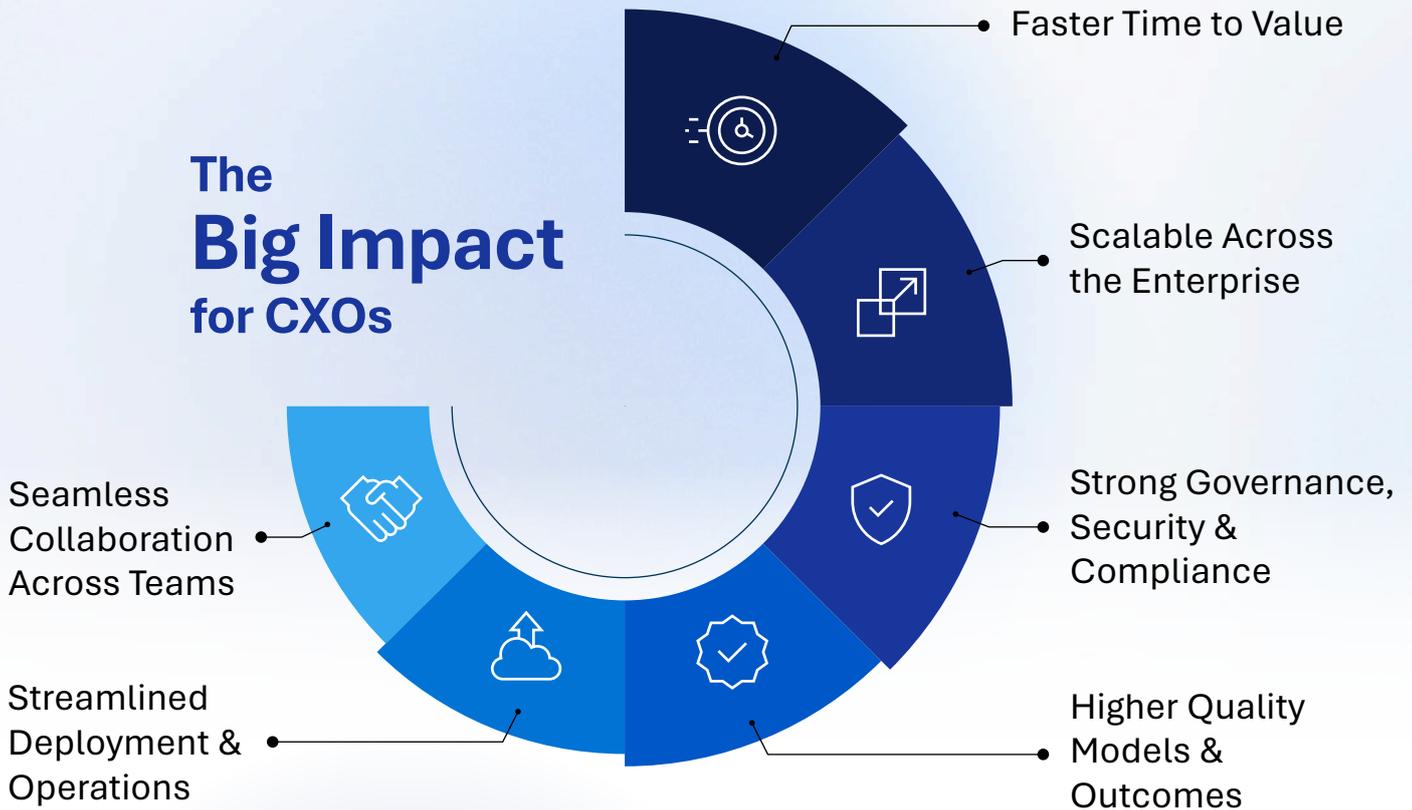

Core AI Pillars

The platform's foundational intelligence layer enables enterprises to process language, interpret visuals, and generate predictive insights at scale.

The Big Impact for CXOs

AgentCORE Advantage

Unified & Extensible Architecture

Cross-Skill Collaboration

Accelerated Time to Value

Reusable Knowledge Repository

Full Lifecycle AI Model Management

Real-Time Monitoring & Explainability

Hybrid & Multi-Cloud Deployment Ready

Enterprise Security & Compliance

Real-World Transformation in Action

AI Operationalization (AIMLOps)

- Governance & Compliance
- Scalable Model Deployment
- Performance Optimization

Hybrid & Secure Platform

- On-premise and public cloud support
- DevSecOps for model management
- Data pipeline orchestration

Program Governance

- AI-Driven Risk & Dependency Dashboards
- Continuous Program Monitoring
- Improved Governance & Cost Control

Industry-Specific Use Cases

- **Banking & Financial Services:** Fraud detection, credit scoring, customer segmentation, automated customer query resolution
- **Manufacturing:** Quality inspection and defect detection, demand forecasting, workforce planning, operational intelligence
- **Retail:** Personalized product recommendations, demand forecasting, inventory optimization, customer service automation
- **Automotive:** Production quality inspection, supply chain forecasting, predictive service insights, dealer and customer assistance

About CoreOps.AI

CoreOps.AI is a native enterprise AI platform that modernizes legacy and core systems by unifying data, deploying AI agents to automate operations, and enabling enterprises to achieve outcomes faster and at lower cost.
